NTBA Standard 2B1Q
ISDN Network Termination

Simple
Plug & Play installation

Field-proven
High quality and dependability

Reliable
Different levels for overvoltage protection

The Product
Network Terminating Unit for ISDN Basic Connections
As network terminating unit for ISDN basic connections, the NTBA enables the transition from the public ISDN subscriber line to the private S-bus. The interface allows the connection of ISDN communication systems, ISDN telephones and ISDN PC cards, offering subscribers access to all the services provided by their network operator.

For ISDN signaling, the system provides two 64 kbps bearer channels and a 16 kbps data channel (a signaling channel which can also serve for data transmission). Two simultaneous external calls are possible, as is channel bundling: the use of both bearer channels for the transfer of large amounts of data.

The NTBA Standard comes with a wall-mounted casing. Power for all internal functions is supplied either by the exchange via the U-interface, or locally.

Advantages of the albis-elcon system
- Simple conversion to an ISDN connection by use of already deployed subscriber lines
- Quick configuration thanks to easily accessible DIP-switches
- Low susceptibility to interferences
- Small, compact housing
- Easy installation
- Highly economical, low power consumption
NTBA Standard 2B1Q
ISDN Network Termination

Application

Technical Data

U interface
- acc. to ETSI TS 102 080 guideline
- Echo cancellation for direction separation on a twin-wire subscriber line
- Line code 2B1Q
- Operating range (if no noise signals occur):
  - 4.8 km using Ø 0.4 mm cable
  - 9.0 km using Ø 0.6 mm cable

S/T interface
- acc. to ETS 300 012 guideline
- Operating range:
  - max. 220 m (short passive bus)
  - max. 1100 m (point-to-point connection)

Power supply
- Nominal voltage: 230 V AC, 50 Hz;
  Optional: 110 V AC, 60 Hz
- Power consumption: 14 VA

Physical parameters

Casing dimensions
- 116 × 105 × 38 mm³ (W × H × D)

Ambient temperatures
- Transport/Storage: -25°C … +55°C
- Operation: 0°C … +55°C

EMC & Safety
- EMC: DIN EN 55022, ETSI EN 300 386, ETSI TS 201 468
- Safety: DIN EN 60950

Note: All rights reserved. Subject to modifications due to technical progress. Errors and printing mistakes may occur.
